

System Information Statement (SIS)

ARTS Version: 1.0/main
Product: Claude Code
Maker: Anthropic, PBC

LOD 0, Composite AI Content Score (CACS): 26
LOD 1, Rating Designator (RD): 38XT/3/3/3/3

LOD 2, ARTS Label

LOD 3, System Information Statement

Position 1, AI Production Scale (3): Symmetrical with frontier engineering labs, the tool's entire multi-platform codebase is developed and maintained via hyper-automated agentic pipelines. Human software engineers are shifted almost entirely to managing pull requests.

Position 2, Data Center Environmental Impact Score (8): Claude Code operates as an open-loop, bidirectional multi-modal runtime. To "see" your desktop, the agent continuously takes high-resolution screenshots, pipes them into multi-modal vision-language models, parses the UI nodes, and reasons across web-search indices simultaneously. Doing this continuously for hours to execute an autonomous task demands massive, un-throttled cloud data center server power and active liquid-cooling utilities.

Position 3, Production/Code Use (Type X=2): The engineering team combines LLM's (L) for syntax automation with advanced agentic workflows (A) to handle continuous integration and automated repository routing.

Position 4, Generative AI Use (Type T): Textual only generation. While it can produce SVG's, artboards, motion graphics, and vector-based interactive templates, these are all code-based artifacts.

System Modifiers:

System Access (3): Requires the user to hand over full terminal and system execution privileges. The tool actively moves the mouse, clicks desktop buttons, types keyboard inputs, creates files, and runs terminal bash scripts directly on your computer's OS.

Network Connectivity (3): The local terminal is just a thin wrapper window; all visual reasoning, multi-step planning loops, and code generation calculations take place on Anthropic's remote server infrastructure.

Sensing (3): Actively records your real-world digital canvas data. The product continuously scrapes screenshots of your desktop windows, monitors running processes, reads raw file data, logs keyboard interaction curves, and tracks user behavior in real time.

Chat Interface (3): The primary command module is a native conversational prompt block. Actively processes open-ended commands to orchestrate long-form planning loops, structures multiple sub-agents, and manipulates your computer's desktop.
