

System Information Statement (SIS)

ARTS Version: 1.0/main
Product: Comfy Desktop
Maker: Comfy Org

LOD 0, Composite AI Content Score (CACS): 11
LOD 1, Rating Designator (RD): 34XN/1/1/0/0

LOD 2, ARTS Label

LOD 3, System Information Statement

Position 1, AI Production Scale (3): Engineered by Comfy Org using highly automated workspace tools including Anthropic’s Claude product family. Main code repository updates, frontend React component scaffolding, and module connection pipelines are synthesized via agentic loops and integrated primarily through reviewed pull requests.

Position 2, Data Center Environmental Impact Score (4): Operates on a local-first architecture. All neural network inference, text-to-image processing, and workflow generations execute directly on the user’s personal workstation GPU, resulting in zero external data center utility footprint during runtime. Uses light background network pings to fetch open-source community custom node packages from remote GitHub repositories. However, agentic tools are heavily relied upon for development. The estimated overall impact therefore scores 2 for water and 2 for energy for a combined total of 4.

Position 3, Production/Code Use (Type X=2): Utilizes automated code synthesis engines combining Large Language Models (L) for script generation and node linking logic with Agentic Workflows (A) to deliver automated PR pipelines.

Position 4, Generative AI Use (Type N): Ships strictly as a software wrapper and runtime shell. The base software application does not contain, distribute, or bundle any pre-trained model weights, image checkpoints, or pre-generated media assets.

System Modifiers:

System Access (1): Requires local execution permissions to run a local Python environment, execute custom script nodes, and write generated files directly to the user’s hard drive.

Network Connectivity (1): Can run completely offline/air-gapped for core generation workflows. Accesses the web only when manually triggering updates or downloading third-party manager packages.

Sensing (0): The application has no access to, nor features requiring or using cameras, microphones or sensors, and no CV (computer vision) algorithms are used. No telemetry, biometrics or PII data is collected.

Chat Interface (0): Does not have a chat interface.
