

Statement of Information Sheet (SIS)

ARTS Version: 1.0
Product: Comfy Cloud
Maker: Comfy Org

LOD 0, Composite AI Content Score (CACS): 15
LOD 1, Rating Designator (RD): 36XN/1/3/0/0

LOD 2, ARTS Label

LOD 3, Statement of Information

Position 1, AI Production Scale (3): Engineered asymmetrically with the Desktop variant via Comfy Org's heavy reliance on automated agentic developer environments (Claude product family) to handle web architecture, interface updates, and API endpoints almost exclusively via automated PR loops.

Position 2, Data Center Environmental Impact Score (6): Moves the compute burden entirely to the cloud. All image diffusion pipelines, model loading, and high-fidelity video synthesis are offloaded onto remote, enterprise-grade cloud server farms. Processing heavy visual graphics results in continuous, high-wattage data center heat emissions and substantial liquid-cooling consumption.

Position 3, Production/Code Use (Type X): Employs Large Language Models (L) and Agentic Software Engines (A) to orchestrate backend development and cloud data pipeline synthesis.

Position 4, Generative AI Use (Type N): Functioning as a cloud portal platform, the baseline application environment provides direct access to models but does not distribute permanently pre-generated media files embedded in its client wrapper code.

System Modifiers:

System Access (1): Highly secure. Runs entirely sandboxed inside a standard web browser window with no native privilege to access, read, or manipulate private files on the user's personal hardware directory.

Network Connectivity (3): Completely inoperable without a continuous internet connection; all workflow graph inputs and media generation outputs must traverse the web.

Sensing (0): Does not utilize computer vision hardware access, camera tracking, local user voice monitoring or sensor data.

Chat Interface (0): Does not have a chat interface.

Additional Specifications & Technical Notes:

N/A
